Summary

Software Developer with 1.5+ years shipping production Flutter and React Native apps in fintech and enterprise banking, plus React web products and Node.js REST APIs. Builds mobile security controls (SSL pinning, RASP) and remediates VAPT findings, plus backend services in Node.js and FastAPI for regulated financial platforms.

Experience

Software Developer

Autotropic Cloud Technologies Pvt. Ltd.

Dec 2024 – Present

Nashik, India

Musaffa | Halal Investing App (1.4M+ Downloads, 4.8 Rating)

- Engineered 5 core modules (Stock Details, ETF Details, Shariah compliance reports, Market News, Investor Dashboard) integrating financial data APIs for a 1.4M+ download app used across 200+ countries
- Increased user engagement by 40% and qualified investment leads by 50% by shipping redesigned Flutter onboarding and WebView content flows for a global halal investing app
- Built a multi-watchlist system with custom filtering and reusable Syncfusion charts pulling market data for financial visualization
- Shipped production Flutter releases across iOS and Android with Product, Design, and QA on a globally distributed fintech team

MyBuddy | HDFC Enterprise Banking (React Native)

- Engineered and maintained a cross-platform React Native banking app across 5 HDFC business units (HNW, BSO, CA, EBFS, S2S) supporting critical operational workflows
- Architected mobile security controls - dynamic SSL pinning, Frida detection, jailbreak/root detection - hardening the app against MITM and reverse-engineering attacks
- Closed third-party VAPT remediations with Charles Proxy and JADX, then owned iOS/Android release readiness so the HDFC banking app could ship after independent penetration testing
- Implemented employee notification engagement with reaction support, analytics, and interaction tracking to improve internal communication effectiveness

Infomanav Terminal | Stocks & ETF Research App (Flutter, macOS & Windows)

- Launched Infomanav Terminal, a Flutter desktop market workstation for macOS and Windows covering live prices, stock/ETF research, screening, watchlists, portfolios, earnings, and Shariah compliance
- Designed Node.js REST APIs for JWT auth, per-user feature flags, watchlists, trading ideas, portfolios, and screener strategies consumed by the Flutter client
- Integrated Finnhub market data (TTL cache, in-flight dedupe, 12-way concurrency, retries) and Typesense multi-search/screener with WebSocket live prices vs indexed snapshots
- Shipped Windows via Edge WebView2 TradingView embeds and JWT/secure-storage fallbacks; on macOS, WKWebView theming, Cmd shortcuts, and non-blocking FCM startup

Projects

ResumeForge | FastAPI, React, Firebase, Groq LLM | [Live Preview](#)

Aug 2026 – Present

- Built a full-stack AI resume tailoring SaaS using FastAPI, React, and Firebase with live preview deployment
- Architected REST API layer for resume parsing, JD analysis, and document generation with modular service design
- Integrated Groq LLM API to generate JD-specific keyword suggestions while preserving original resume structure
- Designed Cursor-style accept/reject diff UI so users review AI rewrites before applying changes to their resume
- Built server-side DOCX-to-PDF export pipeline using headless LibreOffice for ATS-friendly PDF output

Technical Skills

Languages: Dart, Python, JavaScript, TypeScript, SQL

Mobile: Flutter, React Native,GetX, iOS/Android build & release, mobile security (SSL pinning, RASP)

Web & Backend: React, Node.js, FastAPI, REST API design, Firebase (Auth, Firestore, Storage)

Architecture: Clean Architecture, SOLID, MVC, reusable component design

Tools: Git/GitHub, Jira, Figma, Postman, Charles Proxy, JADX, Cursor

Education

MET Institute of Engineering, Nashik

B.E. Artificial Intelligence & Data Science; GPA: 7.96/10; Honors in AI & ML

Nashik, India

Dec 2021 – Jun 2025
